

# Stefan Brunotte

APPLICATION SUPPORT | TECHNICAL SUPPORT | SYSTEM SUPPORT

## PROFILE

Technically oriented support professional with experience in Microsoft 365, identity management, endpoint administration, permissions and user-facing troubleshooting. Currently working in the Karolinska Institutet Helpdesk with Entra ID, Active Directory, Intune, Outlook, OneDrive, MFA, shared accounts and endpoint administration. Previous experience includes both technical support and software development, including a role acting as the technical link between 1st line support and the development team. Seeking the next step within Application Support, Technical Support or System Support.

## PROFESSIONAL EXPERIENCE

### KAROLINSKA INSTITUTET

IT Helpdesk / 1st Line Support | Aug 2024 - Present

Technical support across Microsoft 365, identity, endpoints, permissions, storage and telephony.

- Troubleshoot identity, MFA, authentication and sign-in issues in Microsoft 365 and related applications.
- Administer Microsoft Entra ID and Active Directory, including groups, permissions, members, owners and shared accounts.
- Create and administer shared mailboxes and troubleshoot Outlook, Office, basic Exchange issues and OneDrive synchronisation.
- Work with Intune, LAPS and Authentication Methods, and have carried out user device migrations.
- Manage endpoints in Microsoft Configuration Manager, install software and troubleshoot Windows devices and printers.
- Manage licences, storage resources, and project and lab folders on KI file servers.
- Manage roles, permissions, orders, devices and addresses in Wisum, as well as mobile subscriptions, SIM cards and user details through Telia.
- Escalate cases to specialist teams and follow them through when needed, primarily within Microsoft 365, Office and Outlook.

**Systems/tools:** Microsoft 365 Admin Center, Entra ID, Active Directory, Intune, Configuration Manager, Exchange, OneDrive, LAPS, Dynamics 365, Wisum, Telia MyBusiness, ServiceDesk Web.

### BARNEBYS GROUP AB

Technical Support | Mar 2023 - Jun 2023

Acted as the technical link between 1st line support and the development team, focusing on troubleshooting and cases requiring deeper system understanding.

- Troubleshot and resolved technical customer and system issues in the Barnebys platform.
- Handled cases between 1st line support and development, reducing the need to escalate less complex technical issues.
- Provided technical support during live auctions and extracted data to support troubleshooting.
- Collaborated with developers on more complex technical cases and system issues.

**Systems/tools:** Skeleton, SQL, Visual Studio, VS Code, Postman, PowerShell, Azure Portal.

## TECHNICAL SKILLS

### Microsoft & IT Support

Microsoft 365, Entra ID, Active Directory, Intune, Exchange, OneDrive, Configuration Manager, LAPS, MFA, Windows, Dynamics 365

### Development

JavaScript, TypeScript, C#, React, Angular, HTML, CSS, .NET

### Data & Tools

SQL, SQLite, Git, GitHub, Visual Studio, VS Code, Azure DevOps, WordPress, ChatGPT

### Basic Working Knowledge

PowerShell, Postman, Azure Portal

## CERTIFICATIONS

- ITIL 4 Foundation
- MS-900 Microsoft 365 Fundamentals
- SC-900 Security, Compliance & Identity Fundamentals
- AZ-900 Microsoft Azure Fundamentals
- Cisco Networking Basics
- Introduction to Cybersecurity
- IT Support & Helpdesk

## PERSONAL TECHNICAL PROJECT

### MRBRUNOTTE'S TRADING JOURNAL

Personal development project · Desktop application · Ongoing

Lead and continuously develop my own Trading Journal system, where I am responsible for the product concept, requirements, functionality, priorities, testing and decisions about how the application should work.

- Define how the application modules, data flows and functionality should work, and test the implementation in React, Tauri and SQLite.
- Specify requirements and test solutions for CSV import, data normalisation and grouping of copied trades so that the same trading decision is not counted multiple times.
- Design how data for trades, accounts, strategies, reviews and screenshots should relate to each other, and how P&L, execution quality and behavioural patterns should be analysed.
- Define requirements for and verify features for backup, restore, local screenshot management and a rule- and data-driven Trading Coach based on historical reviews.
- All code in the project has been generated with the help of ChatGPT based on my instructions and requirements. I am responsible for product requirements, functionality, prioritisation, testing, validation and development decisions.

Technology: React, JavaScript, Vite, Tailwind CSS, Tauri, SQLite, Recharts and ChatGPT.
